

Chapter 6: Automated and Emerging Technologies

Question 1: Compare industrial robots and domestic robots, highlighting their typical applications.

Question 2: Define "automation" and provide an example of an automated process.

Question 3: Describe the concept of "Machine Learning" and its role in autonomous systems.

Question 4: Explain how Internet of Things (IoT) devices can enhance home automation.

Question 5: Give an example of a wearable technology device and discuss its potential benefits.

Question 6: Identify the key components of a robotic system, including sensors and actuators.

Question 7: Suggest ways in which automation can improve efficiency in a manufacturing plant.

Question 8: Define "Artificial Intelligence" (AI) and provide examples of AI applications.
